PROJECTS

Excellence University

A responsive, modern landing page for a fictional university. This project highlights clean UI, structured navigation, and educational content sections. Built with HTML, CSS, and JavaScript, it simulates a real-world academic institution's online presence with attention to layout and usability.

EXPERIENCE

I've been building websites for a while now, both personal projects and for actual clients. I've worked on projects ranging from small business sites to product landing pages and portfolio websites. Most of them were built using HTML, CSS, JavaScript, and React. I also handled responsive design, SEO basics, and image optimization to improve load time and performance. Each project helped me improve not just my coding skills, but also how I understand user needs and good design.
